ADR-0001: integration is the trunk; main is production

Updated 25 September 2026

Why integration is the trunk that deploys staging and main is production, receiving only release pull requests.

<https://docs.gurbanisoul.com/adr/0001-integration-default-branch/>

Status: accepted (2026-09-15)

Context

The repo shipped straight from `main` with no staging and no gates. The team wants to test on integration/staging before production.

Decision

`integration` becomes the default branch and trunk (auto-deploys staging). `main` is a protected production branch that only receives release PRs from `integration/hotfix`. Rulesets enforce this once the owner is on GitHub Team.

Consequences

A merge to `integration` is always safe to stage; production is always a deliberate, tagged release. Requires GitHub Team for enforced protection.
