Design notes and audit reports from the project's history, kept for the record and linked from here with the date they stopped being current — not published as pages, never a source of truth.

Everything here is **history**. These documents describe the system as it was when they were written; the current truth is the code and the pages this wiki generates or verifies against it. They are kept in the repository, linked from here, and **not published as wiki pages**. If a document below contradicts a current page, the current page wins — and if it matters, open an issue.

Stale by design. Numbers, file names, hosts and versions in these files are those of their day (a Git LFS database, a single Render service for staging, three logged corrections, the old repository name). Do not quote them as current.
