

Reference · Writing these docs

Contributing to the wiki

Updated 11 October 2026

How to write, diagram, poster and widget for this wiki so the gates pass and the pages stay true: the page rules, the diagram rules, the poster kit, the widget contract, the docs job.

<https://docs.gurbanisoul.com/contributing/>

The wiki is Markdown under `docs/`, reviewed in pull requests like code and rendered by `docs-site/` ([ADR-0003](#), [ADR-0012](#)). Every page is also readable on GitHub, so nothing you write may depend on the site to make sense. The repository-wide rules are in [CONTRIBUTING](#)¹; these pages are the wiki's own.

Writing a page

any page: frontmatter, links, the scripture rule, terms, quizzes, verified stamps

Adding a diagram

a Mermaid diagram in a page

Adding a poster

a large step-through picture

Adding a widget

anything interactive

The docs gates

what make `docs-check` and the docs job check, and how to read a failure

Pages as Markdown, the page menu and print

every page is also served under `/md/`, has a menu to copy, open or print it, and prints as a clean document

Two rules above all: **scripture is never typed into a page**, and **the code is the truth** — a page that describes code names the files it was read against, and the gates check what they can.
