<https://docs.gurbanisoul.com/ios/contributing/> · a pinned copy of Algorythmos-AI/gurbani-soul-ios at a386422

Pinned copy. The canonical file is [gurbani-soul-ios/CONTRIBUTING.md](#)¹ at commit a386422 — edit it there. This wiki publishes it by pin ([ADR-0012](#)); a newer version arrives as a reviewed bump of `docs-site/sources.lock.json`.

Ground rule

This app presents sacred scripture. Never alter, normalise or paraphrase Gurmukhi text. Display transforms (such as the traditional saroop rendering) stay display-only: copy, share and search always use the verbatim text. If something in the text looks wrong, open a `scripture-fidelity` issue; never fix it here.

Workflow

1. Branch from `main` (`feat/...`, `fix/...`, `chore/...`).
2. `make gates` and, for any change under `ios/Packages`, `make parity`.
3. UI changes: add a shot ("`...`") to `testCaptureScreens` for any new surface and attach screenshots.
4. Open a PR. `ci`, `parity`, `app` and `secrets` must be green. PRs are squash-merged.

Conventions

- Bundle ids `org.sggs.*`, App Group `group.org.sggs` and the `sggs://` URL scheme are internal identifiers and do not change with the brand.
- `CURRENT_PROJECT_VERSION` stays 1; each upload passes `BUILD=N`.
- `ios/Resources/sggs-ios.sqlite` is derived and git-ignored; its manifest is tracked. After a branch switch run `make ios-db-check` (and `make ios-db-repair` if it fails).
- Commit messages use the imperative mood and explain why.
