Learning paths

Updated 27 September 2026

Four guided routes through the wiki — platform engineer, data engineer, iOS engineer, reviewer or scholar — each a checklist of pages and exercises in the order that builds understanding.

<https://docs.gurbanisoul.com/learning-paths/>

A path is a checklist: pages to read and exercises to do, in an order that builds on itself. Tick items as you go — the ticks are remembered in your browser only (nothing is sent anywhere) — and start again whenever you like. Every path begins with the same two stops: the reverence checklist and Scripture 101, because the one rule of this project comes before any code.

The four learning paths share a start and branch by role

Platform engineer

someone who will change the API, the website or the pipeline that ships them (about two days)

Data engineer

someone who will work on the corpus, the database, the gates or a dataset release (about two days)

iOS engineer

someone who will change the app (about a day and a half)

Reviewer or scholar

a Granthi, a scholar or a maintainer who reviews changes and never writes code (half a day)

Each exercise on a path is runnable with `make targets` alone and says what output to expect; the [exercises index](#) lists them all.

Sri Guru Granth Sahib Ji — Knowledge Base wiki. Generated from commit c3d9360. Updated 27 September 2026. This copy may be out of date; the page is at <https://docs.gurbanisoul.com/learning-paths/>
